Design Architect's/Applicant's Certification Of Selection Criteria

The Agency has requested certain certifications from the architect and applicant in connection with the submission of an application.

Development: Manchester Scattered Sites

The development referenced above includes the following physical characteristics, design amenities, and other provisions for ranking points consideration. (Initial all that apply.)

Development Characteristics

Energy Conservation/Green Building

As the DESIGN ARCHITECT, I hereby certify that I either have designed or will design the referenced development to include the following energy conservation and sustainability measures.

Smart Site Selection - The development is located on, or is a(n):

- ☐ Brownfield (A former industrial or commercial property on which redevelopment or reuse is complicated by the presence of a hazardous substance, pollutant or contaminant. The presence of lead based paint, asbestos or an underground storage tank does not constitute a Brownfield. The remediation of the environmental hazard must be within the scope of this project to qualify for these points.)
- ☐ Residential Infill (A vacant, but previously developed site or one containing a dilapidated structure that will be demolished, located in an existing developed residential neighborhood or a neighborhood consisting of mixed use residential/commercial properties, where infrastructure for the development is in place or in close proximity. The infill shall be consistent with the type and scale of the neighborhood buildings. If the infill structure is only part of the total project, it must represent at least 51% of the total square footage of the project to qualify for these points. Residential over commercial buildings may qualify for these points if this is consistent with the neighborhood buildings.)
- ☐ Adaptive Reuse (The rehabilitation of an existing vacant non-residential building into residential or residential/commercial space. The residential portion of the rehabilitated building must represent at least 51% of the total residential area of the development.)

Certification under a National Green Building Program

- ☐ Enterprise Green Communities - 2020
- ☐ LEED v4 BD+C Homes & Multifamily Low-rise (1-3 stories) - Silver
- ☐ LEED v4 BD+C Multifamily Midrise - Silver OR
- ☐ LEED v4 BD+C New Construction & Major Renovation - Silver (4 stories or more)
- ☐ ICC 700-2020 National Green Building Standard - Silver

TAB_08_02 CERTIFICATION OF SELECTION CRITERIA 208

PENNSYLVANIA HOUSING FINANCE AGENCY (2021 UNDERWRITING APPLICATION)

This preservation development will achieve certification under one of the green building standards indicated below:

- ☒ Enterprise Green Communities - 2020 Moderate Rehab
- ☐ LEED v4 OM - Multifamily - Certified
- ☐ ICC 700-2020 National Green Building Standard Under Section 305.2 - Whole Building Rating - Bronze
- ☐ ICC 700-2015 National Green Building Standard Under Section 305.4 - Functional Areas Rating - Compliant with Chapter 12 (must include kitchens and bathrooms)

Note: For developments certifying under a National Green Building Program, proof of Project registration/Pre-Build Certification will be required with the Development Submission drawings/specification package.

Energy Efficiency Goals (Only one of the following may be selected)

- ☐ The development will meet Passive House certification requirements (nationally or internationally) for energy efficiency as described below. (See www.phius.org or www.assbv.de/en for additional guidance.)
- ☐ To qualify for these points, the project must contract with a qualified Certified Passive House Consultant who will certify the proposal at the time of application to PHFA. This certification shall be based on a completed Passive House Planning Package (PHPP) or WUFI Passive (WPI) energy model showing compliance with the Passive House Institute (PHI) or the Passive House Institute U.S. (PHIUS) standard and shall be based on schematic drawings and specifications, discussions, assumptions and cost estimates agreed to by the development team (developer, architect, engineer, contractor, energy rater, Passive House consultant). Submission of the PHPP or WPI to a Passive House certifying agency is not required at the time of application submission to PHFA. The energy model shall be included in the application accompanied by a brief description of the assumptions made (wall/roof/door construction, insulation levels, mechanical systems, windows, renewable energy systems, etc.). The Passive House consultant shall provide a copy of their Passive House certification and a list of previous experience in Passive House projects, including contact persons and contact information. After awards of PennHOMES funds and/or tax credits have been made, all successful applicants will be required to get a pre-certification from PHIUS or PHI under the normal time frame and procedures, and forward this to PHFA as part of the Design Development drawing & specification submission. During construction all requirements of the certifying Passive House agency shall be inspected by a rater/verifier who was not involved in the building design. At construction completion all tests, verifications and commissioning required by the certifying Passive House agency shall be performed by the rater/verifier. After each site visit by the rater, a report shall be submitted to PHFA. **Passive House certification is required.**
- ☐ *Qualified is defined as having completed a minimum of two similar Passive House buildings or an inexperienced certified consultant working under the supervision of a qualified consultant.

POCKET REPLACEMENT FROM THE EXTERIOR FOR BLOCK FRAME WINDOWS
INSTALLING NEW BLOCK FRAME WINDOWS IN EXISTING WOOD DOUBLE-HUNG OR SINGLE-HUNG WINDOWS

1 REMOVE THE EXISTING SASHES

CAUTION: Many windows in older homes are painted with lead-based paint. Removal of old windows may disturb this paint. Proper precautions must be taken to minimize exposure to dust and debris. Consult state or local authorities for more information.

REMEMBER TO USE APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

A. Measure the width and height of the pocket opening. The new window must be 1/2" to 3/4" smaller than this measurement.

B. Unlock the window, if the sashes are painted shut, use a high-speed oscillating tool or a utility knife to cut the joint between the sashes and frame stops until the sashes are free.

C. Remove the exterior stops at the head and jambs using a chisel, reciprocating saw, roto-tool or equivalent. Cut them flush with the side of the frame.

D. Carefully remove the upper sash and dispose of it properly.

For older existing windows with weight pocket and pulley balances, cut the cords, letting the weights fall and remove the pulleys.

For windows with vinyl or aluminum jamb liners, tilt or twist the sash and release it from the balance assembly.

E. Remove the head and jamb parting stops (if applicable) by pulling or prying them out of the frame.

F. Carefully remove the lower sash.

G. Remove any remaining jamb liner material (if applicable).

H. Insulate the weight chamber (if desired).

2 PREPARE THE OPENING

A. Inspect the existing window frame. Repair or replace any deteriorated parts.

B. Clean the opening of any dirt, debris or excess old paint.

Note: if using aluminum coil exterior trim, apply it now.

C. Apply flashing tape to the sill. Cut one piece of tape the same length as the sill. Extend the tape up the vertical leg of the stool. Work the tape into the corner and press firmly to adhere the tape. Lap the tape over any coil trim at the sill.

D. Apply sealant over any gaps in the corners of the existing frame.

E. Check the sill for level or for bowing.

F. Install and level sill shims only if necessary to correct for bowing of the sill. Place 1" wide x 1/4" to 3/8" thick shims 1/2" from each side. Place additional shims under each mullion and sliding window interlocker.

For vinyl windows, add shims so maximum spacing is 18".

G. Attach shims to prevent movement after they are level.

NOTE: Improper placement of shims may result in bowing the bottom of the window.

3 PREPARE THE WINDOW

See next page for Sill Adapter illustrations.

A. Drill pilot holes (if necessary) in the new window frame.

See anchoring instructions at the end of this booklet.

B. Dry fit the window in the opening.

C. Measure the distance from the bottom of the window to the existing sill. Remove the window from the opening.

D. Trim the sill adapter to the correct height (if applicable). Use a sharp utility knife to score the sill adapter along the groove. Bend and break off the excess sill adapter material.

E. Install the sill adapter. Cut it to length and notch it (if necessary).

F. Dry fit the window a second time to ensure a proper fit. Remove the window from the opening.

G. Create 1/4" weep holes (Vinyl products only). Drill or notch a weep hole 1" from each end of the sill adapter.
