Design Architect's/Applicant's Certification Of Selection Criteria

The Agency has requested certain certifications from the architect and applicant in connection with the submission of an application.

Development: Manchester Scattered Sites

The development referenced above includes the following physical characteristics, design amenities, and other provisions for ranking points consideration. (Initial all that apply.)

Development Characteristics

Energy Conservation/Green Building

As the DESIGN ARCHITECT, I hereby certify that I either have designed or will design the referenced development to include the following energy conservation and sustainability measures.

Smart Site Selection - The development is located on, or is a(n):

- Brownfield (A former industrial or commercial property on which redevelopment or reuse is complicated by the presence of a hazardous substance, pollutant or contaminant. The presence of lead based paint, asbestos or an underground storage tank does not constitute a Brownfield. The remediation of the environmental hazard must be within the scope of this project to qualify for these points.)
- Residential Infill (A vacant, but previously developed site or one containing a dilapidated structure that will be demolished, located in an existing developed residential neighborhood or a neighborhood consisting of mixed use residential/commercial properties, where infrastructure for the development is in place or in close proximity. The infill shall be consistent with the type and scale of the neighborhood buildings. If the infill structure is only part of the total project, it must represent at least 51% of the total square footage of the project to qualify for these points. Residential over commercial buildings may qualify for these points if this is consistent with the neighborhood buildings.)
- Adaptive Reuse (The rehabilitation of an existing vacant non-residential building into residential or residential/commercial space. The residential portion of the rehabilitated building must represent at least 51% of the total residential area of the development.)

Certification under a National Green Building Program

- Enterprise Green Communities - 2020
- LEED v4 BD+C Homes & Multifamily Low-rise (1-3 stories) - Silver
- LEED v4 BD+C Multifamily Midrise - Silver OR
- LEED v4 BD+C New Construction & Major Renovation - Silver (4 stories or more)
- ICC 700-2020 National Green Building Standard - Silver

TAB_08_02 CERTIFICATION OF SELECTION CRITERIA 208

PENNSYLVANIA HOUSING FINANCE AGENCY (2021 UNDERWRITING APPLICATION)

This preservation development will achieve certification under one of the green building standards indicated below.

- Enterprise Green Communities - 2020 Moderate Rehab
- LEED v4 OM - Multifamily - Certified
- ICC 700-2020 National Green Building Standard Under Section 305.2 - Whole Building Rating - Bronze
- ICC 700-2015 National Green Building Standard Under Section 305.4 - Functional Areas Rating - Compliant with Chapter 12 (must include kitchens and bathrooms)

Note: For developments certifying under a National Green Building Program, proof of Project registration/Pre-Build Certification will be required with the Development Submission drawings/specification package.

Energy Efficiency Goals (Only one of the following may be selected)

- The development will meet Passive House certification requirements (nationally or internationally) for energy efficiency as described below. (See www.ptsu.org or www.assbv.de/en for additional guidance.)
- To qualify for these points, the applicant must contract with a qualified Certified Passive House Consultant who will certify the proposal at the time of application to PHFA. This certification shall be based on a completed Passive House Planning Package (PHPP) or WUFI Passive (WUFI) energy model showing compliance with the Passive House Institute (PHI) or the Passive House Institute U.S. (PHIUS) standard and shall be based on schematic drawings and specifications, discussions, assumptions and cost estimates agreed to by the development team (developer, architect, engineer, contractor, energy rater, Passive House consultant). Submission of the PHPP or WUFI to a Passive House certifying agency is not required at the time of application submission to PHFA. The energy model shall be included in the application accompanied by a brief description of the assumptions made (wall/roof/ceiling construction, insulation levels, mechanical systems, windows, renewable energy systems, etc.). The Passive House consultant shall provide a copy of their Passive House certification and a list of previous experience in Passive House projects, including contact persons and contact information. After awards of PennHOMES funds and/or tax credits have been made, all successful applicants will be required to get a pre-certification from PHIUS or PHI under the normal time frame and procedures, and forward this to PHFA as part of the Design Development drawing & specification submission. During construction all requirements of the certifying Passive House agency shall be inspected by a rater/verifier who was not involved in the building design. At construction completion all tests, verifications and commissioning required by the certifying Passive House agency shall be performed by the rater/verifier. After each site visit by the rater, a report shall be submitted to PHFA. **Passive House certification is required.**

*Qualified is defined as having completed a minimum of two similar Passive House buildings or an inexperienced certified consultant working under the supervision of a qualified consultant.

Substantial Rehab:

- For 100% electric dwellings/buildings: HERS Index of 70 or less (without solar PV)
- For dwellings/buildings utilizing gas: HERS Index of 60 or less (without solar PV)

Preservation (Moderate Rehab) *:

- For 100% electric dwellings/buildings*: HERS Index of 80 or less (without solar PV)
- For dwellings/buildings utilizing gas: HERS Index of 75 or less (without solar PV)

*Preservation developments whose scope of work exceeds that of Moderate Rehab must meet the requirements for Substantial Rehabilitation.

NOTE:

- Buildings that fall under the Energy Star Multi-Family High Rise program must use the REMrate HERS rating program as verification for these points but must follow the NHERF program to achieve the Energy Star label.
- All HERS indexes shall be uploaded to the RESNET Registry and the registry ID number shown on the HERS certificate provided at construction completion.

POCKET REPLACEMENT FROM THE EXTERIOR FOR BLOCK FRAME WINDOWS
INSTALLING NEW BLOCK FRAME WINDOWS IN EXISTING WOOD DOUBLE-HUNG OR SINGLE-HUNG WINDOWS

1 REMOVE THE EXISTING SASHES

CAUTION: Many windows in older homes are painted with lead-based paint. Removal of old windows may disturb this paint. Proper precautions must be taken to minimize exposure to dust and debris. Consult state or local authorities for more information.

REMEMBER TO USE APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

- A. Measure the width and height of the pocket opening. The new window must be 1/2" to 3/4" smaller than this measurement.
- B. Unlock the window. If the sashes are painted shut, use a high-speed oscillating tool or a utility knife to cut the joint between the sashes and frame stops until the sashes are free.

- C. Remove the exterior stops at the head and jambs using a chisel, reciprocating saw, roto-tool or equivalent. Cut them flush with the side of the frame.
- D. Carefully remove the upper sash and dispose of it properly.
- For older existing windows with weight pocket and pulley balances, cut the cords, letting the weights fall and remove the pulleys.
- For windows with vinyl or aluminum jamb liners, tilt or twist the sash and release it from the balance assembly.
- E. Remove the head and jamb parting stops (if applicable) by pulling or prying them out of the frame.
- F. Carefully remove the lower sash.
- G. Remove any remaining jamb liner material (if applicable).
- Caution: Some balances are spring-loaded.
- H. Insulate the weight chamber (if desired).

2 PREPARE THE OPENING

- A. Inspect the existing window frame. Repair or replace any deteriorated parts.
- B. Clean the opening of any dirt, debris or excess old paint.
- Note: If using aluminum coil exterior trim, apply it now.

- D. Apply sealant over any gaps in the corners of the existing frame.
- E. Check the sill for level or for bowing.
- F. Install and level sill shims only if necessary to correct for bowing of the sill. Place 1" wide x 1/4" to 3/8" thick shims 1/2" from each side. Place additional shims under each mullion and sliding window interlocker.
- For vinyl windows, add shims so maximum spacing is 18".
- G. Attach shims to prevent movement after they are level.

3 PREPARE THE WINDOW

- See next page for Sill Adapter illustrations.
- A. Drill pilot holes (if necessary) in the new window frame. See anchoring instructions at the end of this booklet.
- B. Dry fit the window in the opening.
- C. Measure the distance from the bottom of the window to the existing sill. Remove the window from the opening.
- D. Trim the sill adapter to the correct height (if applicable). Use a sharp utility knife to score the sill adapter along the groove. Bend and break off the excess sill adapter material.
- E. Install the sill adapter. Cut it to length and notch it (if necessary).
- F. Dry fit the window a second time to ensure a proper fit. Remove the window from the opening.
- G. Create 1/4" weep holes (Vinyl products only). Drill or notch a weep hole 1" from each end of the sill adapter.

4 SET AND FASTEN THE WINDOW

- A. Apply a 3/8" bead of sealant where the existing stool meets the existing window sill. Additionally, place sealant at the ends of the flashing tape, making sure to connect with the stool sealant.
- B. Apply a 3/8" bead of sealant at the exterior surface of the interior head and jamb stops. Connect this bead of sealant to the sealant line on the stool.
- C. Insert the window in the opening. Check to make sure the window rests against the interior stops and is making contact with the sealant.
- D. Place shims and begin driving screws at each predrilled hole in the window frame. Add additional shims at the ends of meeting rails and as necessary to ensure even reveal between the frame and sashes.
- Refer to the anchoring instructions at the end of this booklet.
- Ensure the window frame remains fully embedded in sealant.
- NOTE: Keep shims 1/2" from the exterior surface of the window to allow for backer rod and sealant.
- E. Cut the checkrail band at each jamb and remove. Tilt the sashes to remove checkrail clips (if applicable).
- Pella® Lifestyle Series Dual-Pane only: Push the remaining tails of the band into the jambliner holes.
- F. Check for plumb, level, square and adjustment. Make any necessary adjustments to shims and finish installing frame screws.
- G. Adjust the screw jacks (if applicable) with a screwdriver. Turn clockwise to move the frame toward the sash.
- Tilt the lower sash inward to locate the jamb jacks in the interior balance channel near the checkrail.
- H. Install interior sealant from the exterior. Refer to the interior sealant instructions at the end of this booklet.
- I. Install exterior sealant. Refer to the exterior sealant instructions at the end of this booklet.
- J. Install exterior frame expanders at this time (if necessary).

INTERIOR AND EXTERIOR SEALANT FOR BLOCK FRAME AND RENOVATION® / PRECISION FIT® WINDOWS

Interior Sealant Instructions

CAUTION: Use low pressure polyurethane window and door insulating foams. Follow the directions on the can. Do not use high pressure or latex foams.

- A. Insert the nozzle or straw between the rough opening and window frame. This can be done from the interior or exterior.
- B. Place a 1" deep bead of foam approx. 1" from the interior of the frame to allow for expansion. Do not fill the entire depth of the rough opening cavity.
- NOTE: Apply foam between the frame and rough opening, NOT between jamb extensions and the rough opening.
- C. To ensure a continuous interior seal, apply sealant over the interior surface of any shims or clips that interrupt the foam seal.
- Backer rod (if necessary) and sealant can be used in place of the low expansion foam to create the interior seal. However, foam has greater insulating properties. Fiberglass batt or similar insulation is not recommended as it can absorb water and does not act as an air seal.

For windows set against drywall return or wood interior stops:

- D. Apply a corner bead of sealant where the frame and drywall return or stop meet. This sealant covers any gaps and creates a smooth transition between materials. Applying a continuous interior bead of sealant eliminates the need for low expansion foam.
- Note: Use a low odor, paintable sealant such as Pella Window and Door Installation Sealant.
- E. Re-check window operation and remove shipping spacers after foam installation. Excess foam may be removed with a serrated knife after it cures.

Exterior Sealant Instructions

CAUTION: Use a high quality, multi-purpose exterior sealant such as Pella Window and Door Installation Sealant. Follow the directions on the cartridge.

- A. If the space between the new window frame and the opening is greater than 1/4", go to step (B). If less than 1/4" or if the frame does not project past an exterior stop (Figure 1), skip to step (C).
- B. Insert backer rod 3/8" deep in the space around the window. Backer rod adds shape and controls the depth of the sealant line.
- C. Apply a continuous bead of sealant where the new frame contacts the exterior stop (Figure 1) or between the frame and the opening (Figures 2, 3 and 4). Continue the seal across the bottom of the sill adapter (if applicable). Do not block weep holes or weep hoods with sealant.
- NOTE: For full frame replacement in brick or siding, where the wall is designed to manage water do not leave gaps or weeps in the interior sealant. For pocket replacement, if weep holes are not present in the sill adapter and the existing sill slopes to the exterior, leave weep gaps in the sealant (Figure 5).
